

What's the Problem?

Below are some of the problems that bees are facing.
Draw a line connecting the problem to the sentence that best describes it.

Malnutrition

Varroa Mites bite bees and transmit viruses, causing the bees to become sick.

Pests & Disease

Bees are losing places with suitable food and shelter to live in and have to move out of the area.

Stress

Bees don't have enough variety of blooming flowers available throughout the year.

Habitat Loss

Plants are sprayed with chemicals that are poisonous to insects, including bees

Pesticides

Bees are put on trucks and moved between different climates in order to pollinate crops.
