SAGER Family Farm

Monarch Measuring

Measure the growth of your Monarch Caterpillar to see how fast it grows. Carefully hold your ruler next to the caterpillar to see how long it is (don't touch the caterpillar - it might curl up or fall). Don't forget to write your units: Millimeters (mm) are good for measuring small caterpillars (10mm = 1cm). You can also take notes of which instar you think your caterpillar is in, if its color or pattern changed, or draw a picture.
